

Building a new home or renovating? Have you thought about your sewerage system? We can help!

Nature Flow® Premier HSTP's use patented self-cleaning ultra violet technology in conjunction with sand media filtration to effectively treat all your domestic wastewater – black and grey.

Nature Flow® Premier HSTP's are packed full of features:

FEATURE	BENEFIT
Only 1 service per year.	Cheaper Most other systems have 4 services per year.
Efficient – minimal running time. Does not run 24 hours/day.	\$10 –15 per year in running costs (some systems cost over \$300/year)
Sand Media Filter (ASF) gives more surface area than a polishing unit.	More bacteria in the ASF means cleaner better quality wastewater.
Chemical free.	Safer for your family. Better for the environment.
Single 8 000 litre tank 4+ compartments	Higher water quality due to longer retention time. Larger than most two tank systems.
Water Re-use	Use you water twice – once in the home and then again for sprinkling lawns or gardens!
High quality treated wastewater.	No smell! Effluent is clear and odourless!
Installation by wastewater treatment specialists.	Fully qualified plumbers and drainers with specialist training on on-site sewerage treatment plants.
Wastewater pumped through ASF not gravity fed.	Easily handles “peak loads”. Effectively uses whole of ASF and alleviates problem of “channelling”. Results in cleaner water quality.
